

DEVESH PUROHIT

Date of birth: 21/03/2004 | **Nationality:** Indian | **Gender:** Male | **Phone:** (+91) 9461042383 (Mobile)

Email: deveshpurohit275@gmail.com | **LinkedIn:** [linkedin.com/in/devesh-purohit-06557b245](https://www.linkedin.com/in/devesh-purohit-06557b245) |

WhatsApp: 9461042383

Address: A-4 Anandam, Behind Veterinary Hospital, Nagaur, Rajasthan, India (Home)

ABOUT ME

Full Stack Developer with hands-on experience building scalable MERN stack (MongoDB, Express.js, React.js, Node.js) web applications. Proficient in Next.js, TypeScript, REST API design, JWT/OAuth authentication, and Supabase. Experienced in implementing role-based access control, real-time features, CI/CD workflows using Git and Vercel, and delivering production-ready SaaS products. Foundation in Data Structures, OOP's, DBMS, and Operating Systems, System Design. Passionate about clean architecture, performance optimization, and shipping reliable, maintainable software.

WORK EXPERIENCE

Software Engineer Intern – Trodec – 01/2026 – 03/2026 – Remote, India

- Developed and maintained responsive frontend features using React.js, Next.js, TypeScript, and Tailwind CSS, improving code reusability through a modular, component-based architecture, reduce code duplication.
- Integrated frontend applications with RESTful APIs and implemented JWT-based authentication and role-based access control (RBAC), enabling secure and seamless user experiences across multiple modules.
- Optimized application performance using lazy loading, code splitting, and efficient state management techniques, resulting in faster page rendering and improved user experience.
- Collaborated in Agile development sprints, participated in code reviews, and managed version control workflows using Git and GitHub.

Frontend Developer Intern – Avinya Web – 06/2025 – 07/2025 – Remote, India

- Built responsive and cross-browser compatible user interfaces using React.js, TypeScript, and Tailwind CSS, achieving pixel-perfect fidelity to Figma and wireframe design specifications.
- Improved frontend performance through component optimization, lazy loading, and code-splitting techniques in Next.js applications, reducing page load time by ~25%.
- Developed reusable UI components and implemented client-side routing with React Router to enhance application scalability and maintainability.
- Collaborated with the development team to deliver production-ready web applications following modern frontend best practices.

EDUCATION AND TRAINING

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE & ENGINEERING Bikaner Technical University, Bikaner

Final grade: 7.7 / 10 (CGPA) | **Year:** 2022 – 2026

HIGHER SECONDARY CERTIFICATE (12TH GRADE) Swami Vivekanand Govt. Model School

Year: 2022

SECONDARY SCHOOL CERTIFICATE (10TH GRADE) Swami Vivekanand Govt. Model School

Year: 2020

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, Python, C, C++
Frontend:	React.js, Next.js, HTML5, CSS3, Tailwind CSS, Shadcn/UI, Framer Motion, Responsive Design
Backend / Full-Stack:	Node.js, Express.js, REST API Design, Mongoose ODM, Middleware, MVC Architecture, Server-Side Rendering (SSR), API Rate Limiting, Error Handling, Fast API, Flask
Database:	MongoDB (Aggregation, Indexing, Atlas), PostgreSQL (via Supabase), MySQL
Database Tools:	MySQL Workbench, Supabase (PostgreSQL), MongoDB Atlas
Auth & Security:	JWT, OAuth 2.0, NextAuth.js, bcrypt, HTTPS, CORS, Role-Based Access Control (RBAC)
DevOps & Cloud:	Git, GitHub, Vercel, Linux CLI basics
Testing:	Postman (API Testing)
Operating System:	Windows 10, macOS
CS Fundamentals:	Data Structures & Algorithms, OOP's, Operating Systems, DBMS, Software Engineering, System Design
AI-Assisted Dev:	ChatGPT, Claude, Gemini (used for prototyping, debugging, documentation, and development acceleration)

PROJECTS: WEB-BASED APPLICATION TOOLS

BillMate – Invoice & Client Management SaaS

Link

- Developed a full-stack SaaS platform using Next.js, React, TypeScript, and Supabase (PostgreSQL) for invoice generation, client management, and business workflow automation.
 - Integrated Gemini AI to generate intelligent invoice summaries and automate content creation, reducing manual effort and improving user productivity.
 - Built a reusable component library and scalable TypeScript-based architecture, improving maintainability and type safety across 20+ application modules.
 - Deployed on Vercel with a clean CI/CD pipeline, ensuring reliable and consistent production releases.
- Tech Stack:** Next.js, React.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL, Gemini AI, Node.js, Vercel

EatoAI – AI Nutrition & Recipe Assistant

Link

- Engineered an AI-powered recipe and nutrition platform using Next.js and TypeScript, integrating the Gemini AI API to dynamically generate personalized recipes based on user-provided ingredients and dietary preferences.

- Implemented secure user authentication using NextAuth.js with Google OAuth, enabling seamless login and saving personalized meal histories across hundreds of generated recipes.
- Designed a responsive, interactive user interface using Tailwind CSS, Framer Motion, and deployed the application on Vercel with a clean CI/CD pipeline.

Tech Stack: *Next.js, TypeScript, Tailwind CSS, NextAuth.js, Google OAuth, Gemini AI, REST APIs, Vercel*

EV Charger Platform – EV Infrastructure Management System

[Link](#)

- Developed a full-stack web platform for EV charging infrastructure using Next.js 16, React 19, Supabase, and PostgreSQL, featuring charger catalogs, blogs, and case studies.
- Architected a scalable relational database schema and implemented secure server-side rendering (SSR) with Supabase Authentication, delivering fast, SEO-optimized page experiences.
- Enhanced frontend engagement with Framer Motion animations and robust form validation using React Hook Form, ensuring smooth and accessible user interactions.

Tech Stack: *Next.js 16, React 19, TypeScript, Tailwind CSS, Supabase, PostgreSQL, Framer Motion, React Hook Form*

ROLES AND RESPONSIBILITIES

- Developed and maintained responsive web applications using React.js, Next.js, TypeScript, and Tailwind CSS, with a consistent focus on performance, scalability, and user experience.
- Built reusable UI components and modular frontend architectures, reducing code duplication and improving maintainability across all projects.
- Integrated RESTful APIs and authentication systems, including JWT-based authentication and OAuth 2.0 workflows, to enable secure user interactions.
- Implemented client-side routing, state management, form validation, and error handling to ensure seamless, bug-free user experiences.
- Optimized application performance through lazy loading, code splitting, server-side rendering (SSR), and efficient data-fetching strategies.
- Collaborated with cross-functional teams in Agile environments, participating in sprint planning, code reviews, debugging, and feature delivery.
- Designed and managed database schemas using MongoDB and PostgreSQL (via Supabase), supporting scalable full-stack application development.
- Integrated third-party services and APIs, including Gemini AI, Google OAuth, and cloud-hosted backend services.
- Automated development workflows using Git, GitHub, and Vercel, maintaining clean deployment pipelines and version control discipline.
- Contributed to end-to-end product development — from UI implementation and API integration to testing, deployment, and production support.
- Leveraged AI-assisted development tools (ChatGPT, Gemini, GitHub Copilot) for rapid prototyping, debugging, and documentation — always maintaining full architectural ownership and code quality.
